

CITY HEALTH DEPARTMENT

REGULAR VAGINAL (FEMALE) OR URETHRAL (MALE) SMEAR

ABOUT THE SERVICE

A smear is a type of examination, where a doctor collects a small amount of material from the mucosal surface. Smear test is most often used in urology for men and in gynecology for women. Smear examination for culture helps check for the presence of disease-causing bacteria and cancerous cells, and in some cases to evaluate the endocrine profile and the overall condition of the tissue.

WHO CAN AVAIL OF THE SERVICE

Any resident, employee in any establishment (entertainers) or ambulant vendor of Longapo or nearby city, who wishes to check presence of sexually transmitted infections.
